Advancements in Soil Quality Assessment: A Comprehensive Review of Machine Learning and AI-Driven Approaches for Nutrient Deficiency Analysis

S. Barathkumar | K. Sellamuthu | K. Sathyabama | P. Malathi | R. Kumaraperumal | P. Devagi

Environmental Science, Computer Science · Communications in Soil Science and Plant Analysis · 24 September 2024

TLDR This **review** provides a detailed overview of the diverse AI tools and models used for the detection of various soil properties, including random **forests**, support vector **machines**, and **Artificial** and **Deep** neural networks. Expand

The use of artificial intelligence algorithms to detect macroplastics in aquatic environments: A critical review.

M. A. Astorayme | I. Vázquez | R. Kahhat | Environmental Science, Computer Science · Science of the Total Environment · 1 June 2024

TLDR This article provides a concise overview of **artificial intelligence** concepts, followed by a bibliometric analysis and a critical **review** of **machine learning techniques** used to detect, classify and quantify MPs in aquatic environments, supported by datasets such as satellite or aerial images and video recordings taken by unmanned aerial vehicles. Expand

Weed Detection Using Deep Learning: A Systematic Literature Review

Nafeesa Yousuf Murad | Tariq Mahmood | A. Forkan | Ahsan Morshed | P. Jayaraman | Muhammad Shoaib Siddiqui

Computer Science, Agricultural and Food Sciences · Italian National Conference on Sensors · 31 March 2023

TLDR A systematic literature **review** (SLR) on current state-of-the-art DL **techniques** for weed detection and a detailed thematic analysis of ML/DL algorithms used for detecting the weed/crop is presented and provides a unique contribution to the analysis and assessment of the performance of these ML/ DL **techniques**. Expand

Mapping football tactical behavior and collective dynamics with artificial intelligence: a systematic review

J. Teixeira | Eduardo Maio | +8 authors | Luís Branquinho | Computer Science · Frontiers in Sports and Active Living · 30 May 2025

TLDR In conclusion, the AI-based models can effectively reshape the landscape of spatiotemporal tracking data into training and practice routines with real-time decision-making support, performance prediction, match **management**, tactical-strategic thinking, and training task design. Expand

A comprehensive review on artificial intelligence-driven preprocessing, segmentation, and classification techniques for precision furcation analysis in radiographic images

Mamta Juneja | Naveen Aggarwal | Sumindar Kaur Saini | S. Pathak | M. Kaur | Manojkumar Jaiswal

Medicine, Computer Science · Multimedia tools and applications · 30 July 2024

TLDR A comprehensive evaluation of CAD systems for dental radiographic images, with a specific emphasis on key elements including preprocessing, segmentation, and classification, to evaluate their efficacy and potential applications in the field of medical image analysis especially furcation analysis is presented. Expand

A Review of Artificial Intelligence Applications in Climate Change Mitigation

Sandiponi Tasha Environmental Science, Computer Science · International Journal of Environment and Climate... · 26 May 2025

TLDR While AI is not a standalone solution, it is a critical component in the global climate mitigation strategy, and with the right investments in education and research, AI has the potential to become a cornerstone of global climate action. Expand

Breast cancer risk prediction using machine learning: a systematic review

Sadam Hussain Mansoor Ali +4 authors Jose Gerardo Tamez-Peña

Medicine, Computer Science · Frontiers in Oncology · 20 March 2024

TLDR This **review** provides a comprehensive guide for understanding the current status of breast cancer risk assessment using AI, and offers investigators a different perspective on the use of AI for breast cancer risk prediction, incorporating numerous imaging and non-imaging features. Expand

How can Big Data and machine learning benefit environment and water management: a survey of methods, applications, and future directions

A. Sun B. Scanlon Environmental Science, Computer Science · Environmental Research Letters · 1 July 2019

TLDR This **survey** examines the potential and benefits of data-driven research in EWM, give a synopsis of key concepts and approaches in Big Data and ML, provide a systematic **review** of current applications, and discuss major issues and challenges, and recommend future research directions. Expand

A Short Survey of AI-driven Load Distribution for Electronic Health Record Management with Recent Deployed Techniques, Research Gaps and Challenges

S.Suryanarayanaraju Dr.M.Chandra Naik Dr. R.N.V Jagan Medicine, Computer Science · 2024 5th International Conference on Smart... · 18 September 2024

TLDR A detailed literature **survey** is conducted on AI-driven load distribution framework for federated networks on EHR from the previous decades, and the research gaps on the conventional AI-driven load distribution framework for federated networks on EHR are provided to facilitate future work. Expand

Integrating Digital Twins and Artificial Intelligence Multi-Modal Transformers into Water Resource Management: Overview and Advanced Predictive Framework

Toqeer Ali Syed Muhammad Yasar Khan Salman Jan S. Albouq Saad Said Alqahtany M. Naqash

Environmental Science, Engineering · Applied Informatics · 25 October 2024

TLDR This paper proposes a novel framework that synergizes these **techniques** into a unified, multi-layered model and incorporates a digital twin and a multi-modal transformer approach, aiming to leverage the collective advantages of each method while overcoming individual constraints, significantly enhancing prediction accuracy and operational efficiency. Expand
