Land cover, more than monthly fire weather, drives fire-size distribution in Southern Québec forests: Implications for fire risk management

J. Marchal · S. Cumming · Eliot J. B. McIntire · Environmental Science ·

PLoS ONE · 13 June 2017

TLDR This work **modelled fire** size distributions in southern Québec as functions of **fire** weather **and land** cover as well as explicitly integrating some of the biotic interactions **and** feedbacks in a **forest-wildfire** system, finding that, contrary to expectations, **land**-cover **and** not **fire** weather was the primary driver of **fire** size in the study region. Performance metrics in supply chain management

J. Kleijnen · M. Smits · Business, Engineering ·

Journal of the Operational Research Society · 1 May 2003

This **survey** paper starts with a critical analysis of various performance metrics for supply chain **management** (SCM), used by a specific manufacturing company. Then it summarizes how economic theory… Expand

Long-term climate, vegetation and fire regime change in a managed municipal water supply area, British Columbia, Canada

K. Brown · Njr Hebda · G. Schoups · N. Conder · Kapu Smith · J. Trofymow

Environmental Science · The Holocene · 18 June 2019

Post-glacial climate, vegetation and **fire** history were reconstructed from a sediment record from Begbie Lake, British Columbia, Canada, located in a municipal water supply area servicing > 350,000… Expand

Development and Application of Process-based Simulation Models for Cotton Production: A Review of Past, Present, and Future Directions

K. Thorp S. Ale +10 authors J. White

Agricultural and Food Sciences · Journal of Cotton Science · 1 March 2014

The development and application of cropping system **simulation models** for cotton production has a long and rich history, beginning in the southeastern U. S. in the 1960s and now expanded to major… Expand

Thermodynamics of Pyrocumulus: A Conceptual Study

K. Tory W. Thurston J. Kepert Environmental Science, Physics · Monthly Weather **Review** · 25 July 2018

In favorable atmospheric conditions, **fires** can produce pyrocumulonimbus cloud (pyroCb) in the form of deep convective columns resembling conventional thunderstorms, which may be accompanied by… Expand

Impacts of fire and climate change on long-term nitrogen availability and forest productivity in the New Jersey Pine Barrens

M. Lucash R. Scheller Alec M. Kretchun K. Clark J. Hom

Environmental Science · 3 January 2014

Increased **wildfires** and temperatures due to climate change are expected to have profound effects on **forest** productivity and nitrogen (N) cycling. **Forecasts** about how **wildfire** and climate change will… Expand

Supply Chain Management in Food Chains: Improving Performance by Reducing Uncertainty

J. V. D. Vorst A. Beulens W. D. Wit P. Beek

Business, Agricultural and Food Sciences · 1 November 1998

This paper investigates the impact of Supply Chain **Management** on logistical performance indicators in food supply chains. From a **review** of quantitative and more qualitative managerial literature, we… Expand

Monte Carlo-based ensemble method for prediction of grassland fire spread

M. G. Cruz Environmental Science · 15 July 2010

The operational **prediction** of **fire spread** to support **fire management** operations relies on a deterministic approach where a single 'best-guess' **forecast** is produced from the best estimate of the… Expand

Coarse Filter Ecosystem Management in a Nonequilibrating Forest

G. Armstrong W. Adamowicz J. A. Beck S. Cumming F. Schmiegelow

Environmental Science · Forestry sciences · 1 April 2003

TLDR A **model**ing system comprised of an aspatial Monte Carlo **simulation model and** a linear programming based **forest** activity scheduling **model** was developed, used to develop 200 yr **forecast**s of probability distributions **for** habitat area of five vertebrate species under a stochastic **wildfire** regime. Dionysus: a stochastic fire growth scenario generator

Lengyi Han W. John Braun Environmental Science · 1 September 2014

TLDR The Prometheus **Fire** Growth **Model** is a deterministic **wildfire** simulat**or** given weather, topographical **and** fuel inf**or**mation, the simulated **fire** front is plotted at equally spaced times **and** a distribution of **fire** front **predictions** is obtained. Expand
