Impact of Artificial Intelligence in Nursing for Geriatric Clinical Care for Chronic Diseases: A Systematic Literature Review

Mahdieh Poodineh Moghadam | Zabih Allah Moghadam | M. C. Qazani | Paweł Pławiak | R. Alizadehsani

Medicine, Computer Science · IEEE Access · 2024

TLDR The findings indicate that although AI applications in geriatric care are promising, they require significant enhancements in technology and methodology to improve accuracy and reliability, and future research should focus on developing advanced AI tools, integrating cutting-edge **deep learning** models and comprehensive datasets to refine diagnostics and treatment protocols for chronic diseases in the elderly. Expand

Mechanistically Informed Machine Learning and Artificial Intelligence in Fire Engineering and Sciences

M. Z. Naser | Engineering, Computer Science · Fire technology · 2 January 2021

TLDR This **review** starts by introducing a number of **machine learning** (ML) and **artificial intelligence** (AI) **techniques** such as **deep learning**, metaheuristics, decision trees, random **forest**, support vector **machines** etc. to enable researchers and practitioners from implementing MI with ease. Expand

A Comprehensive Review of AI Techniques for Resource Management in Fog Computing: Trends, Challenges, and Future Directions

Deafallah Alsadie | Computer Science, Environmental Science · IEEE Access · 2024

TLDR A systematic analysis of relevant research papers on FC showed the significant progress made in optimizing FC through innovative **techniques**, emphasizing the need for further exploration of these challenges and the integration of emerging technologies like **deep** reinforcement **learning** for enhanced FC performance. Expand

OPTIMIZING SYSTEMIC LUPUS ERYTHEMATOSUS CARE WITH ARTIFICIAL INTELLIGENCE: A SYSTEMATIC REVIEW OF CLINICAL APPLICATIONS

J. Sarmiento-Monroy | José-Marcos Gómez-Puerta | Medicine, Computer Science · Journal of Rheumatology · 20 May 2025

TLDR AI, employing NLP algorithms, demonstrates the capacity to extract clinically relevant data from EHRs, thereby enhancing the identification and comprehensive clinical characterization of SLE patients, thereby enhancing the identification and comprehensive clinical characterization of SLE patients. Expand

Cognitive AI for Wildfire Management in Southern California: Challenges and Potentials

M. Hossain | Jami Yaseer Rahman | Environmental Science, Computer Science · Social Science Research Network · 24 February 2025

TLDR Integration of cognitive AI model with evolving technologies like drones, IoT sensors, and edge computing holds a magnificent potentials for creating a more efficient andresponsive

wildfire management ecosystem. Expand

The Role of Artificial Intelligence in Bathing Water Quality Assessment: Trends, Challenges, and Opportunities

M. Usman Saeed A. Khan Ashenafi Yohannes Battamo Rajendran Ravindar M. Salauddin

Environmental Science, Computer Science · Water · 6 November 2025

TLDR This systematic literature review synthesises current research on the application of AI in BWQ assessment, focusing on predictive modelling techniques and remote sensing approaches, and identifies dominant modelling techniques such as Artificial Neural Networks (ANN), Deep Learning (DL), Decision Tree (DT), Random Forest (RF), Multiple Linear Regression (MLR), and Hybrid and Ensemble Boosting algorithms. The Use of Artificial Intelligence in Disaster Management - A Systematic Literature Review

Vimala Nunavath Morten Goodwin Olsen Computer Science, Environmental Science · International Conference on Information and… · 1 December 2019

TLDR It is concluded that most of the reviewed articles used AI, ML, and DL methods on social media data, satellite data, sensor data, and historical data for classification and prediction. Expand

A comprehensive review on automation in agriculture using artificial intelligence

Kirtan Jha Aalap Doshi Pooja Patel Manan Shah

Computer Science, Agricultural and Food Sciences · Artificial Intelligence in Agriculture · 1 June 2019

TLDR This paper surveys the work of many researchers to get a brief overview about the current implementation of automation in agriculture, and discusses a proposed system which can be implemented in botanical farm for flower and leaf identification and watering using IOT. Expand

Review of Detection Denial of Service Attacks using Machine Learning through Ensemble Learning

Nazanin Najm Abdulla Rajaa K. Hasoun Computer Science · Iraqi Journal for Computers and Informatics · 30 June 2022

Today's network hacking is more resource-intensive because the goal is to prohibit the user from using the network's resources when the target is either offensive or for financial gain, especially in… Expand

Artificial Intelligence in Diagnostic Imaging Enhancing Patient Care Through Advanced Algorithms and Data Integration

Shazia Hassan Medicine, Computer Science · Proceedings of ICAITD 2025 · 2 July 2025

TLDR The fundamental principles behind AI innovations—including traditional methods like Support Vector Machines and Random Forests, as well as deep learning models such as convolutional neural networks and transformer-ased architectures—and their applications in detecting, classifying, and segmenting medical images are explored. Expand
