Exploring AI-Driven Approaches for Predicting Electric Vehicle Charging Behaviour: A Literature Review

Jyoti · Rainu Nandal · Meenakshi · Vipin Kumar · Engineering, Computer Science ·

2025 2nd International Conference on… · 30 October 2025

TLDR How AI-driven predictive modelling is essential to creating intelligent, user-centred, and sustainable EV ecosystems, which in turn supports international initiatives to create cleaner and more effective transportation systems is emphasized. Expand

AI-driven early diagnosis of specific mental disorders: a comprehensive study

Firuze Damla Eryılmaz Baran · Meriç Çetin · Computer Science, Medicine ·

Cognitive Neurodynamics · 5 May 2025

TLDR The findings of the study highlight the effectiveness of LSTM and GRU for sequential data analysis and their applicability in medical imaging or natural language processing and XGBoost and LightGBM are noted to be highly accurate ML tools for clinical diagnoses. Expand

ResQ - AI Powered Disaster Management and Resource Allocation System

Shivam Maurya · A. Dwivedi · Ayushi Srivastava · Samiksha Tiwari

Environmental Science, Computer Science · International Research Journal on Advanced… · 16 February 2026

TLDR This **review** examines recent research on the application of **machine learning**, **deep learning**, generative AI, multimodal data fusion, UAV and satellite imagery analysis, blockchain-based transparency, and optimization-driven decision support in disaster **management** systems and discusses future directions toward the development of unified, scalable, and adaptive AI-driven disaster **management** frameworks. Post-crash analysis and injury severity prediction in vehicle-pedestrian collisions using logistic regression and AI-based predictive analytics

Samuel Omefe · Engineering, Computer Science · International Journal of Science and Research… · 30 July 2025

TLDR A hybrid modeling method based on logistic regression and explainable AI and real-time data integration is a promising direction to go in terms of both predictive accuracy and policy explainability and to improve pedestrian safety and post-crash interventions in the complex urban transportation setting. Expand

AI predicting recurrence in non-muscle-invasive bladder cancer: systematic review with study strengths and weaknesses

Saram Abbas · R. Shafik · N. Soomro · Rakesh Heer · Kabita Adhikari

Medicine, Computer Science · Frontiers in Oncology · 7 January 2025

TLDR This comprehensive **review** critically examines ML-based frameworks for predicting NMIBC recurrence and illuminates the nuances, complexities and contexts that influence the real-world advancement and adoption of these AI-driven **techniques** in precision oncology. Expand

A Survey of Recent Advances in Crowd Density Estimation using Image Processing

Komal R. Ahuja N. Charniya Computer Science ·

International Conference on Communication and… · 1 July 2019

TLDR This paper presents **review** of different methodologies those have been implemented for estimating crowd density estimation, such as, image processing **techniques**, **machine learning** and **deep learning** based technique, and smartphone based technique. Expand

Intelligent Kidney Stone Diagnosis: Evaluating ML and DL Methods for Prediction and Classification

S. K M. Devi Medicine, Computer Science · International Conference on Robotics and… ·

7 November 2025

TLDR A detailed **review** and comparative evaluation of different ML and DL methods used for kidney stone prediction and classification are provided and hybrid methodologies and future directions to enhance diagnostic effectiveness and validity are proposed. Expand

Uncovering the Potential of Indoor Localization: Role of Deep and Transfer Learning

O. Kerdjidj Yassine Himeur +8 authors Diana W. Dawoud Computer Science, Engineering ·

IEEE Access · 2024

TLDR This **review** study gives an in-depth look into IL, covering the most promising **artificial intelligence**-based and hybrid strategies that have shown excellent potential in overcoming some of the limitations of classic methods within IoT environments. Expand

Different fundus imaging modalities and technical factors in AI screening for diabetic retinopathy: a review

Gilbert Lim V. Bellemo Yuchen Xie X. Q. Lee M. Yip D. Ting

Medicine, Computer Science · Eye and Vision · 14 April 2020

TLDR In the ophthalmology field, it was demonstrated that **deep learning** tools for diabetic retinopathy show clinically acceptable diagnostic performance when using colour retinal fundus images. Expand

Autonomous Unmanned Aerial Vehicles in Bushfire Management: Challenges and Opportunities

Shouthiri Partheepan Farzad Sanati J. Hassan Environmental Science, Engineering · Drones ·

10 January 2023

TLDR It is concluded that, despite the potential benefits of UAVs for bush**fire management**, there are shortcomings in accuracy, and solutions need to be optimized for effective bush**fires management**. Expand
