Remote Sensing for Wildfire Mapping: A Comprehensive Review of Advances, Platforms, and Algorithms

G. Williamson | Giuseppe Modica | +6 authors | E. Barboza

Environmental Science, Computer Science

TLDR The normalized burn ratio (NBR) and the normalized difference vegetation index (NDVI) were the most frequently used indices in **fire** mapping, while random **forest** and convolutional neural networks were prominent among the applied algorithms. Expand

IMPACT OF SBI RETIAL BANKING ON CUSTOMER SATISFACTION

S.Ashwini | V.Sandeep Kumar | K.Archana | Business, Computer Science ·

Scientific Digest : Journal of Applied… · 25 July 2025

TLDR The findings suggest that AI-driven models provide significantly more accurate and actionable insights than conventional methods, empowering SBI to enhance service quality and customer retention. Expand

Detection of Cardiovascular Disease from Clinical Parameters Using a One-Dimensional Convolutional Neural Network

M. M. R. Khan Mamun | Tarek Elfouly | Medicine, Computer Science · Bioengineering · 1 July 2023

TLDR A hybrid one-dimensional convolutional neural network (1D CNN) is proposed, which uses a large dataset accumulated from online **survey** data and selected features using feature selection algorithms and proved to show better accuracy compared to contemporary **machine learning** algorithms and **artificial** neural networks. Expand

Development of Explainable AI Models for Healthcare Applications

Samantha Lee | Medicine, Computer Science · International Academic Journal of Science and… ·

24 December 2024

TLDR To facilitate patient monitoring, a Smart Health **Management** (SHM) system often incorporates Wireless Sensor Networks, Wireless Body Area Networks, and the Internet of Things and introduces additional technologies like **artificial intelligence** and **machine learning** to help with the diagnosis, identification, and prediction of medical diseases. Expand

AI-Based Sugarcane Leaf Disease Recognition and Analysis A Comprehensive Survey of AI Techniques for Sugarcane Leaf Disease Detection

Varun S. Purohit[1] | Pratik K. Sontakke[2] | Sumit K. Mangalwedhekar[3]

Agricultural and Food Sciences, Computer Science

TLDR This work **reviews** AI methods which identify and analyse diseases affecting sugarcane leaves using traditional ML classifiers with SVM and Random **Forest** and KNN and **deep learning** models represented by CNNs and their diverse configurations. Expand

Transforming fire protection: AI's evolving role in proactive and reactive applications

Engineering, Computer Science · Applied and Computational Engineering ·

Yucheng Gong

23 October 2024

TLDR The historical development of AI is traced, from its origins in the 1930s and 1940s to its current state, focusing on major milestones and algorithms that have shaped the field. Expand

Machine learning-driven wildfire susceptibility mapping in New South Wales, Australia using remote sensing and explainable artificial intelligence

R. Zakari O. Malik Ong Wee-Hong Environmental Science, Computer Science · Natural Hazards · 2 June 2025

TLDR A method for generating a dataset of **fire** events using freely available remote sensing data via Google Earth Engine is presented and the key driving factors of **wildfire**s during the 2019–2020 summer season are identified. Expand

A comprehensive survey of research towards AI-enabled unmanned aerial systems in pre-, active-, and post-wildfire management

Sayed Pedram Haeri Boroujeni Abolfazl Razi +7 authors K. Vamvoudakis

Environmental Science, Engineering · Information Fusion · 4 January 2024

TLDR This **survey** aims to bridge the gaps by offering a systematic **review** of the recent state-of-the-art technologies, highlighting the advancements of UAV systems and AI models from pre-**fire**, through the active-**fire** stage, to post-**fire management**. Expand

Artificial intelligence in bioinformatics: a survey

Jiyue Jiang Yunke Li +8 authors Jiao Yuan Computer Science, Biology · Briefings Bioinform. · 1 November 2025

TLDR This **review** systematically summarizes recent research progress and representative applications of AI **techniques** in bioinformatics, specifically discussing suitable scenarios and advantages of traditional **machine learning** algorithms, **deep learning** models, and reinforcement **learning** methods. Expand

Artificial intelligence-based risk management for the banking sector: impact and challenges

L. Kuanova A.N. Otegen G. Kenzhegulova P. Karácsony Computer Science, Business · Journal of Economic Research & Business... · 20 June 2025

TLDR The research concludes that AI-driven models have the potential to revolutionize financial risk governance by enabling proactive, data-driven decision-making and fostering operational resilience. Expand
