## SHAP-Driven Explainable Artificial Intelligence Framework for Wildfire Susceptibility Mapping Using MODIS Active Fire Pixels: An In-Depth Interpretation of Contributing Factors in Izmir, Türkiye

M. C. Iban | Oktay Aksu | Environmental Science, Computer Science · Remote Sensing · 2 August 2024

TLDR This study employs eXplainable **Artificial Intelligence** (XAI) **techniques**, particularly SHapley Additive exPlanations (SHAP), to map **wildfire** susceptibility in Izmir Province, Türkiye, revealing clear associations between factors such as wind speed, temperature, NDVI, slope, and distance to villages with increased **fire** susceptibility. Expand

## Advancements in Artificial Intelligence Techniques for Diabetes Prediction: A Comprehensive Literature Review

Emad Majeed Hameed | Hardik Joshi | Qusay Kanaan Kadhim | Medicine, Computer Science · Journal of Robotics and Control (JRC) · 12 February 2025

TLDR The results of this **review** show that the most predominant methods used in diabetes prediction are Random **Forest**, Logistic Regression, Decision Trees, Support Vector **Machine**, Naïve Bayes, and K-Nearest Neighbors, each with distinct advantages and limitations. Expand

## Harnessing artificial intelligence for data-driven energy predictive analytics: A systematic survey towards enhancing sustainability

Thanh Tuan Le | J. C. Priya | Huu Cuong Le | Nguyen Viet Linh Le | Minh Thai Duong | Dao Nam Cao

Environmental Science, Computer Science · International Journal of Renewable Energy... · 10 February 2024

TLDR A comprehensive bibliometric analysis is presented to gain **deep**er insights into the progression of AI in energy research from 2003 to 2023 and demonstrates that ANN can effectively address integration issues between energy and power systems, such as solar and wind forecasting, power system frequency analysis and control, and transient stability assessment. Expand

## Performance centric review of machine learning techniques for electric vehicle powertrain with battery management and charging systems

R. Prasanna | R. S. Kumar | N. S. Bhuvaneswari | C. Karthik | Engineering, Computer Science · Discover Artificial Intelligence · 17 February 2026

TLDR This **review** concludes by identifying promising future directions such as explainable **artificial intelligence** (XAI), digital twins, embedded ML, and federated autonomy that will underpin the next generation of intelligent, scalable, and sustainable EV ecosystems. Expand

## Advancements in Wildfire Detection and Prediction: An In-Depth Review

Reem Salman | Ali Karouni | Elias Rachid | Nizar Hamadeh

Environmental Science, Computer Science · International Journal of Innovative Technology... · 30 January 2024

TLDR Thirty articles published between 2004 and 2023 were **reviewed**, summarizing the technologies utilized in **forest fire** prediction along with comprehensive analysis (**surveys**) of their **techniques** employed for this application. Expand

## A review of machine learning applications in wildfire science and management

P. Jain Sean C. P. Coogan Sriram Ganapathi Subramanian Mark Crowley Steve Taylor M. Flannigan

Environmental Science, Computer Science · Environmental Reviews · 2 March 2020

TLDR A scoping **review** of ML applications in **wildfire** science and **management** and discusses the advantages and limitations of various ML approaches relating to data size, computational requirements, generalizability, and interpretability as well as identifying opportunities for future advances in the science and**management** of **wildfire**s within a data science context. Expand

## Artificial Intelligence in Cellular-V2X Networks: A Survey on Dynamic Spectrum Allocation, Traffic Prediction, and Anomaly Detection

B. Vishwanath P. C. Reddy Computer Science, Engineering ·

2024 3rd International Conference for Advancement… · 6 September 2024

TLDR **Artificial Intelligence**-assisted **techniques** for C-V2X network **management** are investigated, including **Deep** Q-**learning techniques** for dynamic spectrum allocation, **Machine Learning** for improved traffic prediction, and anomaly detection algorithms for improving C-V2X network security. Expand

## The Role of Artificial Intelligence in Next-Generation Handover Decision Techniques for UAVs over 6G Networks

Mohammed Zaid R. Nordin Ibraheem Shayea Computer Science, Engineering · Drones ·

26 January 2026

TLDR A comprehensive **review** of existing HO optimization studies reveals that while conventional methods remain effective for static or low-mobility environments, AI- and ML-driven approaches significantly enhance adaptability, prediction accuracy, and overall network robustness. Expand

## Applications of machine learning for peripheral artery disease diagnosis and management: A systematic review

Negar Aant Masoud Arabbeiki M. Niroomand Medicine, Computer Science ·

Comput. Biol. Medicine · 10 July 2025

TLDR A systematic **review** explores the application of ML algorithms in PAD diagnosis and **management**, focusing on data types, whether numerical or non-numerical, features, performance metrics, software tools, and predicted outcomes, and Random **forest** was the most frequently used algorithm for PAD analysis. Expand

## The use of artificial intelligence in the prevention and management of bleeding disorders: a systematic review

F. Mohamed Ziyad Aldabbagh +4 authors Muhammad Raihan Sajid

Medicine, Computer Science · Frontiers in Medicine · 9 October 2025

TLDR The integration of these variables into AI-driven models has demonstrated superior diagnostic accuracy compared to traditional methods, facilitating early detection, individualized treatment planning, and improved patient outcomes. Expand
