Recurrent Convolutional Deep Neural Networks for Modeling Time-Resolved Wildfire Spread Behavior

J. Burge | M. Bonanni | R. Hu | M. Ihme

Environmental Science, Computer Science · Fire technology · 28 October 2022

TLDR This work uses an autoregressive process in which a convolutional recurrent deep learning **model** makes **predictions** that propagate a **wildfire** over 15 min increments, **and** shows that even after 100 autoregressive **predictions** representing more than 24 h of simulated **fire spread**, the resulting **models** generate stable **and** realistic **propagation dynamics**. The 2017 Split wildfire in Croatia: evolution and the role of meteorological conditions

Ivana Čavlina Tomašević | K. Cheung | +6 authors | V. Milić

Environmental Science, Geography · Natural Hazards and Earth System Sciences · 6 October 2022

Abstract. The Split **wildfire** in July 2017, which was one of the most severe **wildfires** in the history of this Croatian World Heritage Site, is the focus in this study. The Split **fire** is a good example… Expand

Characterizing Forest Fuel Properties and Potential Wildfire Dynamics in Xiuwu, Henan, China

Yan Shi | C. Feng | +5 authors | Wenjie Xie

Environmental Science · Fire · 22 December 2023

As global climate change and human activities increasingly influence our world, **forest fires** have become more frequent, inflicting significant damage to ecosystems. This study conducted measurements… Expand

Decadal predictability of soil water, vegetation, and wildfire frequency over North America

Y. Chikamoto | A. Timmermann | S. Stevenson | P. DiNezio | Sally Langford

Environmental Science · Climate Dynamics · 18 January 2015

The potential decadal predictability of **land** hydrological and biogeochemical variables in North America is examined using a 900-year-long pre-industrial control **simulation**, conducted with the NCAR… Expand

Impact of the El Niño on Fire Dynamics on the African Continent

José Francisco de Oliveira-Júnior | David Mendes | +14 authors | Vafaeva Khristina Maksudovna

Environmental Science · Earth Systems and Environment · 3 January 2024

Several studies investigated the occurrence of **fires** in Africa with numerical **modeling** or applied statistics; however, only a few studies focused on the influence of El Niño on the **fire** risk using a… Expand

Analysing Fire Propagation Models: A Case Study on FARSITE for Prolonged Wildfires

Leonardo Martins | R. Almeida | António Maia | Pedro Vieira

Environmental Science · Fire · 23 April 2025

With increasing **wildfire** severity and duration driven by climate change, accurately predicting **fire behavior** over extended time frames is critical for effective **management** and mitigation of such… Expand

Reframing Wildfire Simulations for Understanding Complex Human–Landscape Interactions in Cross-Cultural Contexts: A Case Study from Northern Australia

Rohan Fisher | S. Heckbert | S. Garnett

Environmental Science, Sociology · Fire · 13 August 2021

An increase in the frequency of severe **fire** events, as well as a growing interest in **wildfire** mitigation strategies, has created a demand for skilled managers of landscape **fire** and a better community… Expand

Predicting Fire Propagation across Heterogeneous Landscapes Using WyoFire: A Monte Carlo-Driven Wildfire Model

C. Ott | B. Adhikari | S. P. Alexander | P. Hodza | Chen Xu | T. Minckley

Environmental Science · Fire · 11 December 2020

The scope of **wildfires** over the previous decade has brought these natural hazards to the forefront of risk **management**. **Wildfires** threaten human health, safety, and property, and there is a need for… Expand

Wildfire–vegetation dynamics affect predictions of climate change impact on bird communities

A. Regos | M. Clavero | M. D'Amen | A. Guisan | L. Brotóns

Environmental Science, Biology · 1 June 2018

TLDR How **fire**-vegetation **dynamics** can modify ability to predict the impact of climate change on bird communities, as described through a widely-used climate change indicat**or**: the community thermal index (CTI), is studied. Expand

Wildfire Pyroconvection and CAPE: Buoyancy's Drying and Atmospheric Intensification—Fort McMurray

A. Bakhshaii | Edward A. Johnson | Kiana Nayebi

Environmental Science · 18 July 2020

The accurate **prediction** of **wildfire behavior** and **spread** is possible only when **fire** and atmosphere **simulations** are coupled. In this work, we present a mechanism that causes a small **fire** to intensify… Expand
