The 2018 Camp Fire: Meteorological Analysis Using In Situ Observations and Numerical Simulations

M. Brewer | C. Clements | Environmental Science · Atmosphere ·

29 December 2019

The November 2018 Camp **Fire** quickly became the deadliest and most destructive **wildfire** in California history. In this case study, we investigate the contribution of meteorological conditions and, in… Expand

Towards predictive simulation of wildfire spread at regional scale using ensemble-based data assimilation to correct the fire front position

M. Rochoux | C. Emery | S. Ricci | B. Cuenot | A. Trouvé

Environmental Science · 2014

The objective of this study is to develop a prototype data-driven **wildfire** simulator capable of **forecasting** the **fire spread dynamics**. The prototype **simulation** capability features the following main… Expand

AI DRIVEN FIRE RISK INDICES INTEGRATING CLIMATE, FUEL, AND TERRAIN FOR WILDFIRE PREDICTION AND MANAGEMENT

Mayowa B George | Enock Okorno Ayiku

Environmental Science, Computer Science

TLDR The development of AI-driven **fire** risk indices that leverage machine learning (ML) **and** deep learning (DL) algorithms to analyze complex patterns in climate variability, vegetation moisture, **and** topographical features are explored. Expand

Comparison and Simulation of Building Thermal Models for Effective Energy Management

F. Amara K. Agbossou A. Cárdenas Y. Dubé S. Kelouwani

Engineering, Environmental Science · 20 April 2015

Energy consumption reduction efforts in the residential buildings sector represent socio-economical, technological and environmental preoccupations which justify advanced scientific research. These… Expand

Wildfire Suppression Cost Forecasts for the US Forest Service

K. Abt J. Prestemon K. Gebert Environmental Science ·

Journal of Forests · 1 June 2009

The US **Forest** Service and other **land-management** agencies seek better tools for anticipating future expenditures for **wildfire** suppression. We developed regression **models** for **forecasting** US **Forest**… Expand

Past and future changes in Canadian boreal wildfire activity.

M. Girardin M. Mudelsee Environmental Science ·

Ecological Applications · 2008

TLDR 21st century **forecast**s of **fire** occurrence in the southern part of the **Bo**real Shield, Canada with the hist**or**ical range of the past 240 years statistically reconstructed from tree-ring width data suggest that the increase in precipitation projected toward the end of the 21st century will be insufficient to compensate f**or** increasing temperatures **and** to maintain potential evapotranspiration at current levels. Expand

Toward an integrated system for fire, smoke and air quality simulations

A. Kochanski M. Jenkins Kara M. Yedinak J. Mandel J. Beezley B. Lamb

Environmental Science · 16 May 2014

In this study, WRF-Sfire is coupled with WRF-Chem to construct WRFSC, an integrated **forecast** system for **wildfire** behaviour and smoke **prediction**. WRF-Sfire directly predicts **wildfire spread**, plume and… Expand

Turning Down the Heat: Vegetation Feedbacks Limit Fire Regime Responses to Global Warming

J. Marchal · S. Cumming · Eliot J. B. McIntire · Environmental Science · Ecosystems · 14 May 2019

Climate change is projected to dramatically increase boreal **wildfire** activity, with broad ecological and socioeconomic consequences. As global temperatures rise, periods with elevated **fire** weather… Expand

Probabilistic fire spread forecast as a management tool in an operational setting

Renata M. S. Pinto · A. Benali · +5 authors · J. Pereira

Environmental Science · SpringerPlus · 28 July 2016

TLDR The probabilistic **fire spread predictions** show great potential to be used as a **fire management** tool in an operational setting, providing valuable information regarding the spatial–temporal distribution of burn probabilities. Expand

Complex dynamics may limit prediction in marine fisheries

S. Glaser · M. Fogarty · +7 authors · G. Sugihara

Environmental Science · 1 December 2014

Complex nonlinear **dynamics** in marine fisheries create challenges for **prediction** and **management**, yet the extent to which they occur in fisheries is not well known. Using nonlinear **forecasting models**,… Expand
