Simulation of land use dynamics and impact on land surface temperature using satellite data

Elhadi K. Mustafa | Guoxiang Liu | Hazem T. Abd El-Hamid | Mosbeh R. Kaloop

Environmental Science · GeoJournal · 3 December 2019

Increasing of global average surface temperature naturally leading to major problems as global warming, which has typically attracted the interest of multinational organizations, civil society groups… Expand

Simulation of monsoon intraseasonal variability in NCEP CFSv2 and its role on systematic bias

B. Goswami | M. Deshpande | +4 authors | B. Goswami

Environmental Science, Physics · Climate Dynamics · 19 February 2014

We have evaluated the **simulation** of Indian summer monsoon and its intraseasonal oscillations in the National Centers for Environmental **Prediction** climate **forecast** system **model** version 2 (CFSv2). The… Expand

Neural machine-based forecasting of chaotic dynamics

Rui Wang | E. Kalnay | B. Balachandran

Physics, Computer Science · Nonlinear dynamics · 19 July 2019

TLDR An alternate **model**ing approach, which is based on data-driven **model**ing, is explored to explore **forecast**ing viability **for** systems that display chaotic **dynamics**, **and** a deep recurrent neural network architecture, a neural machine, is constructed **for forecast**ing temporal evolution of different chaotic systems. Expand

Potential changes in forest composition could reduce impacts of climate change on boreal wildfires.

Aurélie Terrier | M. Girardin | C. Périé | P. Legendre | Y. Bergeron

Environmental Science · Ecological Applications · 2013

TLDR The results show that future warming will create climate conditions that are more prone to **fire** occurrence, however, unlimited dispersal of southern restricted deciduous species could reduce the impact of climate change on future **fire** occurrence. Expand

Risk Analysis Model That Uses Machine Learning to Predict the Likelihood of a Fire Occurring at A Given Property

L. Surya | Environmental Science, Computer Science · 2021

TLDR This research paper presents an analysis **and** description of property **fire prediction** methods based on machine learning, **and** a novel algorithm for property **fire** risk **prediction**, which is based on machine learning, is presented. Expand

High-Fidelity Multi-Rotor Unmanned Aircraft System (UAS) Simulation Development for Trajectory Prediction Under Off-Nominal Flight Dynamics

J. Foster | D. Hartman | Engineering, Environmental Science · 5 June 2017

TLDR **Model and simulation** efforts for a generic quad-rotor configuration typical of many commercial vehicles in use today, **and** an overview of relevant off-nominal multi-rotor **behaviors** will be presented to define **modeling** goals **and** to identify the **prediction** capability lacking in simplified **models** of multi-rotor performance. Expand

Incorporating a Canopy Parameterization within a Coupled Fire-Atmosphere Model to Improve a Smoke Simulation for a Prescribed Burn

D. Mallia | A. Kochanski | S. Urbanski | J. Mandel | Angel Farguell | S. Krueger

Environmental Science · 7 August 2020

Forecasting fire growth, plume rise and smoke impacts on air quality remains a challenging task. **Wildland fires** dynamically interact with the

atmosphere, which can impact **fire behavior**, plume rises,… Expand

Land-Use Changes in Southern Appalachian Landscapes: Spatial Analysis and Forecast Evaluation

D. Wear P. Bolstad Environmental Science, Geography · Ecosystems · 1998

ABSTRACT Understanding human disturbance regimes is crucial for developing effective conservation and ecosystem **management** plans and for targeting ecological research to areas that define scarce… Expand

Hydrologic Remote Sensing and Land Surface Data Assimilation

H. Moradkhani Engineering, Environmental Science · Italian National Conference on Sensors · 1 May 2008

TLDR An overview of the remote sensing measurement techniques **for** soil moisture **and** snow data is provided **and** advances in data assimilation techniques through the ensemble filtering, mainly Ensemble Kalman filter (EnKF) **and** Particle filter (PF), **for** improving the **model prediction and** reducing the uncertainties involved in **prediction** process are described. Expand

Decadal predictability and forecast skill

G. Boer V. Kharin W. Merryfield Environmental Science, Physics · Climate Dynamics · 12 March 2013

The “potential predictability” of the climate system is the upper limit of available **forecast** skill and can be characterized by the ratio p of the predictable variance to the total variance. While… Expand
