About 2,600 results for “review wildfire spread prediction”

Fields of Study | Date Range | Has PDF | Author | Journals & Conferences | More Filters | Filters | Sort by Relevance

Delft University of Technology Modeling wildfire spread in wildland-industrial interfaces using dynamic Bayesian network

N. Khakzad Environmental Science, Engineering · 2019

Global warming and the subsequent increase in the frequency and severity of **wildfires** demand for specialized risk assessment and management methodologies to cope with the ever-increasing risk of… Expand

Short-term fire front spread prediction using inverse modelling and airborne infrared images

Oriol Rios E. Pastor M. M. Valero E. Planas Environmental Science, Engineering · 27 October 2016

A **wildfire** forecasting tool capable of estimating the fire perimeter position sufficiently in advance of the actual fire arrival will assist firefighting operations and optimise available resources.… Expand

PREDICTION OF FIRE SPREAD IN GRASSLANDS USING DEEP LEARNING TECHNIQUES

Environmental Science, Engineering · INTERANTIONAL JOURNAL OF SCIENTIFIC RESEARCH IN… · 20 June 2024

Fire metrics such as fire front location and rate of **spread** (ROS) are critical to understanding the behavior of prescribed fires and **wildfires**. This project proposes a new method for prescribed grass… Expand

A Review of Environmental Factors for an Ontology-Based Risk Analysis for Pandemic Spread

Liege Cheung Adela S. M. Lau K. F. Lam P. Y. Ng Environmental Science, Computer Science · COVID · 11 April 2024

TLDR The objectives of this research are to conduct an empirical **review** and content analysis to identify the environmental factors causing the **spread** of the pandemic and to propose an ontology-based big data architecture to collect these factors for **prediction**. Expand

Generation and evaluation of ensemble simulations of wildfire spread for probabilistic forecast

Frédéric Allaire J. Filippi V. Mallet Environmental Science · 9 November 2018

TLDR This work proposes to perform ensemble evaluation considering all the burn probabilities that are predicted at the scale of a specific fire event and requires the observed burned surfaces corresponding to the specific event. Expand

DATA-DRIVEN SIMULATIONS OF WILDFIRE SPREAD AT REGIONAL SCALES

Cong Zhang Environmental Science, Engineering · 2018

Title of dissertation: DATA-DRIVEN SIMULATIONS OF **WILDFIRE SPREAD** AT REGIONAL SCALES Cong Zhang Doctor of Philosophy, 2018 Dissertation directed by: Professor Arnaud Trouvé

Department of Mechanical… Expand

Review of Wildfire Management Techniques—Part I: Causes, Prevention, Detection, Suppression, and Data Analytics

S. Jazebi F. de León A. Nelson Environmental Science, Engineering ·

IEEE Transactions on Power Delivery · 1 February 2020

This two-part paper is intended to inform power system engineers, electrical engineering academicians, and suppliers of electrical apparatus of the threat of **wildfires** initiated from mal-operation of… Expand

Prediction of Wildfire Fuel Load for Pinus densiflora Stands in South Korea Based on the Forest-Growth Model

Sunjung Lee Young-jin Lee Ju-Yeol Ryu C. Kwon Kyung Won Seo Sungyong Kim

Environmental Science · Forests · 28 August 2022

A **prediction** model was developed for the **wildfire** fuel load of Korean red pine (Pinus densiflora) stands with susceptibility to forest fire based on the forest-growth model. Furthermore, a… Expand

Spatial Partition-Based Particle Filtering for Data Assimilation in Wildfire Spread Simulation

Yuan Long Xiaolin Hu Environmental Science, Computer Science ·

ACM Trans. Spatial Algorithms Syst. · 24 August 2017

TLDR A spatial partition-based particle filtering framework to support data assimilation for large-scale **wildfire spread** simulation effectively and a two-level automated spatial partitioning method is presented to provide automated and balanced spatial partitions with fewer boundary sensors. Expand

Inverse modelling in wildfire spread forecasting: towards a data-driven system

O. R. Rubiras Computer Science · 30 November 2018

TLDR This thesis focuses on the development, implementation and initial validation of a **wildfire** perimeter **spread prediction** model that might help emergency responders on taking sound decisions to efficiently employ resources and protect valuable assets. Expand
