About 2,600 results for “review wildfire spread prediction”

Fields of Study | Date Range | Has PDF | Author | Journals & Conferences | More Filters | Filters | Sort by Relevance

The Meteorology of the August 2023 Maui Wildfire

Clifford F. Mass · David Ovens · Environmental Science, Geography · Weather and forecasting · 24 May 2024

On 8 August 2023, a wind-driven **wildfire** pushed across the city of Lahaina, located in West Maui, Hawaii, resulting in at least 100 deaths and an estimated economic loss of 4-6 billion dollars. The… Expand

A review of traffic models for wildland-urban interface wildfire evacuation

A. Bergstedt · Environmental Science, Engineering · 2018

Recent years have seen an increased prevalence of **wildfires**, some of which has **spread** into the wildland-urban interface and lead to large-scale evacuations. Large-scale evacuations gives rise to both… Expand

Green Firebreaks: Potential to Proactively Complement Wildfire Management

Jady D. Smith · F. E. Putz · Sam Van Holsbeeck · Environmental Science · Fire · 4 September 2025

Green Firebreaks (GFBs), strips of strategically placed low-flammability vegetation, represent a proactive complement to other approaches to **wildfire** management. This **review**, which summarises the… Expand

Large-scale assessment of antimicrobial resistance marker databases for genetic phenotype prediction: a systematic review

Norhan Mahfouz · Inês Ferreira · S. Beisken · A. von Haeseler · Andreas E. Posch

Medicine, Biology · Journal of Antimicrobial Chemotherapy · 13 July 2020

TLDR It is shown that AMR databases need further expansion, improved marker annotations per antibiotic rather than per antibiotic class and validated multivariate marker panels to achieve clinical utility, e.g. in order to meet performance requirements such as provided by the FDA for clinical microbiology diagnostic testing. Expand

Prediction Models for Public Health Containment Measures on COVID-19 Using Artificial Intelligence and Machine Learning: A Systematic Review

Anil Babu Payedimarri · D. Concina · +4 authors · M. Panella · Medicine, Computer Science · International Journal of Environmental Research… · 23 April 2021

TLDR It was showed that quarantine should be the best strategy for containing COVID-19 and social distancing should be considered to be effective only in combination with other interventions including the closure of schools and commercial activities and the limitation of public transportation. Expand

A Review of the Environmental Trigger and Transmission Components for Prediction of Cholera

M. Usmani · Kyle D Brumfield · Y. Jamal · A. Huq · R. Colwell · A. Jutla

Environmental Science, Medicine · Tropical Medicine and Infectious Disease · 5 August 2021

Climate variables influence the occurrence, growth, and distribution of Vibrio cholerae in the aquatic environment. Together with socio-economic factors, these variables affect the incidence and… Expand

Modelling of the Radiant Heat Flux and Rate of Spread of Wildfire within the Urban Environment

Greg Penney S. Richardson Environmental Science, Engineering · Fire · 7 January 2019

One approach to increase community resilience to **wildfire** impacts is the enhancement of residential construction standards in an effort to provide protective shelters for families within their own… Expand

Geospatial Wildfire Risk Assessment from Social, Infrastructural and Environmental Perspectives: A Case Study in Queensland Australia

Mahyat Shafapourtehrany Environmental Science, Geography · Fire · 9 January 2023

Although it is hard to predict **wildfires**, risky areas can be systematically assessed and managed. Some of the factors for decision-making are hazard, vulnerability, and risk maps, which are the end… Expand

Geostatistical Modeling of Wildfire Occurrence Probability: The Case Study of Monte Catillo Natural Reserve in Italy

D. Berardi Marta Galuppi A. Libertà M. Lombardi Environmental Science · Fire · 8 November 2023

The increasing incidence of **wildfires** in the Mediterranean region has raised significant scientific and environmental concerns. This study focuses on a retrospective analysis of **wildfire** ignition and… Expand

Role of flow topology in wind-driven wildfire propagation

Siva Viknesh Ali Tohidi Fatemeh Afghah Robert S Stoll Amirhossein Arzani

Environmental Science · The Physics of Fluids · 6 November 2024

Wildfires propagate through interactions between wind, fuel, and terrain, resulting in complex behaviors that challenge accurate **predictions**. This study investigates the interaction between wind… Expand
