A review of machine learning applications in wildfire science and management

P. Jain | Sean C. P. Coogan | Sriram Ganapathi Subramanian | Mark Crowley | Steve Taylor | M. Flannigan

Environmental Science, Computer Science · Environmental Reviews · 2 March 2020

TLDR A scoping **review** of ML applications in **wildfire** science and management and discusses the advantages and limitations of various ML approaches relating to data size, computational requirements, generalizability, and interpretability as well as identifying opportunities for future advances in the science andmanagement of **wildfire**s within a data science context. Expand

Spatial Prediction of Wildfire Susceptibility Using Field Survey GPS Data and Machine Learning Approaches

O. Ghorbanzadeh | Khalil Valizadeh Kamran | +4 authors | Jinhu Bian

Environmental Science, Computer Science · Fire · 28 July 2019

TLDR The resulting **wildfire** susceptibility maps were validated based on three different ML approaches and four different folds of inventory datasets and the accuracy of each of the twelve resulting maps was assessed through the receiver operating characteristics (ROC) curve. Expand
